ANALYST NOTE

Hera local LLM

The EVO_WEBIDEA_v1550 strategy on VOXR failed decisively, posting a -32.73% ROI and a negative Sharpe ratio of -1.13. With only four trades and a 0.0% win rate, the sample size is statistically insignificant, meaning the results likely reflect noise rather than structural market inefficiency. The 45.89% max drawdown indicates severe risk management failures or poor entry timing during volatile price action. You should halt this configuration immediately and conduct a parameter sensitivity analysis to identify why the signal logic consistently missed favorable exit points.
