ANALYST NOTE

Hera local LLM

The LPG backtest shows a +40.41% return driven by a 66.7% win rate, yet the 3-trade sample size severely limits statistical confidence. A 21.82% maximum drawdown indicates significant volatility risk that contradicts the seemingly robust Sharpe ratio of 1.10. The strategy likely overfit to a narrow set of market conditions rather than capturing sustainable alpha. We must execute a longer backtest with more diverse historical data to validate the robustness of the EVO_EVOEVOEVOE_v2332 logic.
