ANALYST NOTE

Hera local LLM

The GG5 Stochastic Oversold strategy on FIL/USD failed to generate alpha, posting a -2.99% return with a negligible Sharpe ratio of 0.05. The sample size of two trades is statistically insufficient to validate the edge, rendering the 50% win rate meaningless. A 29.98% drawdown indicates poor risk management relative to the asset's volatility during the test period. We must increase the backtest horizon to at least 100 trades before deploying live capital.
