ANALYST NOTE

Hera local LLM

The EVO_GG1RSISNIP_v1565 backtest on LPG shows a +40.41% return, yet the statistical significance is critically low due to only 3 total trades. A win rate of 66.7% combined with a 21.82% maximum drawdown indicates high volatility that cannot be validated by this sparse sample size. The 1.10 Sharpe ratio suggests moderate risk-adjusted returns, but the data is insufficient to confirm strategy robustness. We must expand the test horizon or increase trade frequency to generate a reliable equity curve before deployment.
