ANALYST NOTE

Hera local LLM

The VOXR backtest shows a complete failure with a negative thirty-two percent return and zero winning trades. The negative Sharpe ratio confirms that risk was not compensated by any gain, while the near forty-six percent drawdown indicates severe capital erosion. With only four total trades, the sample size is too small to establish any statistical confidence in this strategy's performance. The RSI-based logic clearly failed to identify viable entry points for this specific asset. The immediate next step is to discard this configuration and re-evaluate the signal thresholds against a broader historical dataset.
