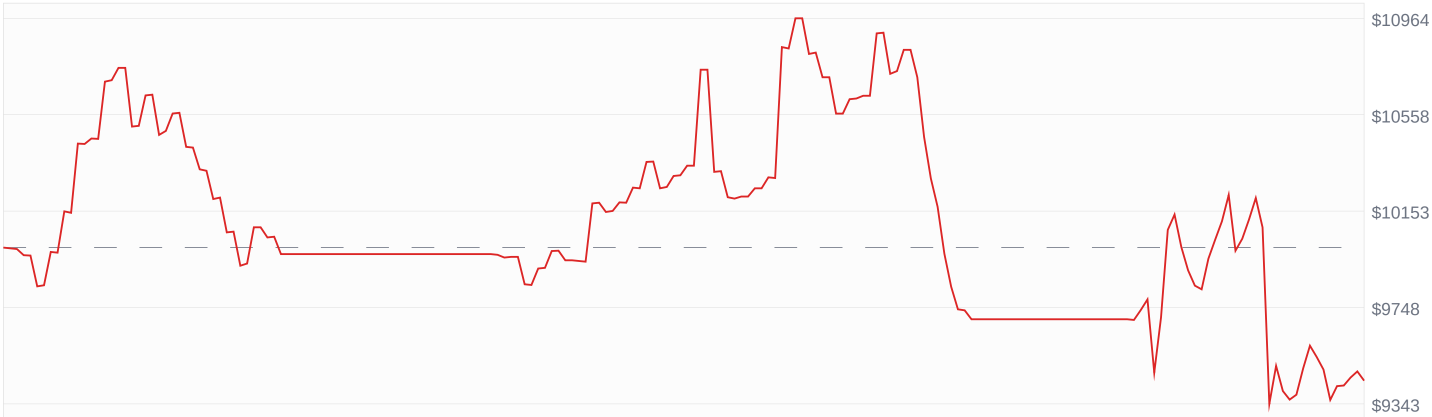
ROI	Sharpe	Win Rate	Max Drawdown
-5.59%	-0.31	0.0%	-14.78%

EQUITY CURVE

202 sessions · starting at $10000.00



ANALYST NOTE

Hera local LLM

The strategy failed to generate any profitable trades, resulting in a negative ROI of -5.59% and a Sharpe ratio of -0.31. With only three total trades and a zero percent win rate, the sample size is statistically insignificant, meaning the results cannot reliably predict future performance. The maximum drawdown of 14.78% indicates poor risk management during the simulation period. To improve, you should increase the sample size by backtesting over a longer historical period to establish statistical confidence before deploying any capital.
