ANALYST NOTE

Hera local LLM

The EVO_EVOEVOEVOE_v2103 strategy on LPG delivered a 40.41% ROI with a 66.7% win rate, yet the sample size of only three trades renders these metrics statistically insignificant and prone to overfitting. A 21.82% maximum drawdown suggests substantial risk exposure that contradicts the moderate 1.10 Sharpe ratio, indicating potential instability during volatile periods. Relying on such a sparse dataset to validate the strategy is methodologically flawed and creates a false sense of security regarding future performance. The next step is to expand the backtest window or adjust entry parameters to generate a minimum of 50 trades for a robust statistical assessment.
