ANALYST NOTE

Hera local LLM

The LPG backtest for EVO_EVOEVOE_v2002 shows a 40.41% return with a 1.10 Sharpe, but statistical significance is weak given only three trades. A 66.7% win rate combined with a 21.82% maximum drawdown indicates high volatility and potential overfitting on this short sample. The strategy likely captured a narrow price range or specific volatility spike rather than a robust trend. We must increase the sample size by testing different timeframes or periods to confirm if this alpha is persistent. Adjusting position sizing to cap drawdowns below 15% should be the immediate next step before deploying live capital.
