ANALYST NOTE

Hera local LLM

The EVO_EVOEVOEVOE_v1799 strategy on ASC generated an 18.35% return, but the statistical significance is negligible due to only three trades executed. A 16.7% win rate combined with a 17.18% maximum drawdown indicates high volatility and potential overfitting to a tiny sample set. The 0.82 Sharpe ratio suggests mediocre risk-adjusted performance relative to the capital deployed. I recommend expanding the test window to at least 50 trades before considering live deployment to validate robustness.
