ANALYST NOTE

Hera local LLM

The EVO_EVOEVOE_v1802 strategy on GOOGL generated an 11% return, yet the sample of only three trades severely undermines statistical confidence in these metrics. While the 66.7% win rate and 0.85 Sharpe ratio look promising on paper, the 11.43% drawdown suggests significant volatility risk that a small dataset cannot adequately capture. The performance appears more like an outlier event than a repeatable edge given the minimal trade history. We must expand the lookback period or adjust entry filters to validate if this signal logic holds under broader market conditions.
