-32.73%	-1.13	0.0%	-45.89%

EQUITY CURVE202 sessions · starting at \$9997.00

ANALYST NOTE

Hera local LLM

The VOXR backtest for EVO_WEBIDEA_v2316 is a statistical failure, posting a negative 32.73% ROI and a Sharpe ratio of -1.13. With only four trades and a zero percent win rate, the sample size is too small to establish any meaningful confidence in the strategy's edge. The 45.89% maximum drawdown highlights severe risk management flaws, as every position resulted in a loss. The primary issue is the complete lack of positive momentum capture, indicating the entry signals are fundamentally misaligned with the asset's price action. You must rebuild the signal logic from scratch to identify valid entry conditions before considering any further deployment.
