ANALYST NOTE

Hera local LLM

The 40.41% ROI and 1.10 Sharpe ratio suggest initial alpha, but the 21.82% drawdown is disproportionate to the gains. With only three trades, the 66.7% win rate lacks statistical significance, making the results highly susceptible to variance. This small sample size prevents reliable confidence in the strategy's long-term viability or risk-adjusted performance. Increase the backtest window to at least fifty trades before evaluating further.
