ANALYST NOTE

Hera local LLM

The +40.41% ROI and 1.10 Sharpe ratio suggest strong initial momentum, but the 21.82% max drawdown indicates significant volatility risk. With only three total trades, the 66.7% win rate lacks statistical significance, meaning this performance is likely driven by small-sample variance rather than a robust edge. The strategy shows promise but fails to demonstrate consistency or risk-adjusted stability over a meaningful period. To validate the alpha, you must extend the backtest window to include at least fifty to one hundred trades before considering live deployment.
