ANALYST NOTE

Hera local LLM

The EVO_GG1RSISNIP_v70 strategy on RDN failed catastrophically, recording a zero percent win rate across only three trades and eroding capital by 5.59%. With a negative Sharpe of -0.31 and a peak drawdown exceeding 14 percent, the sample size is statistically insufficient to validate any edge or structural flaw. The near-total lack of successful entries suggests a critical misalignment between the signal logic and current market volatility, rendering the approach non-viable in its present form. Before pursuing optimization, we must expand the backtest horizon to gather meaningful data points and recalibrate entry thresholds.
