ANALYST NOTE

Hera local LLM

An ROI of 87.88% on AMD looks impressive but is statistically meaningless with only two trades. The 50% win rate and 26.05% max drawdown suggest high variance rather than consistent edge. A Sharpe ratio of 1.61 is unreliable here because it is inflated by the tiny sample size. This backtest proves nothing about the strategy's real-world viability. Run a 500-trade simulation on a longer historical period to get meaningful statistical confidence.
