ANALYST NOTE

Hera local LLM

The EVO_EVOEVOEVOG_v501 strategy on BTC-USD failed decisively with an -11.23% ROI and a negative Sharpe ratio of -0.69, indicating severe underperformance against a risk-free benchmark. A catastrophic 24.12% maximum drawdown and a dismal 25.0% win rate across only four trades suggest the model is overfitting to noise rather than capturing genuine market inefficiencies. With such a tiny sample size, statistical confidence is nonexistent, and the results cannot be generalized or expected to repeat. The strategy requires immediate parameter re-optimization or a complete logic overhaul before any live deployment is considered.
