202 sessions · starting at \$9997.00

ANALYST NOTE

Hera local LLM

The LPG backtest for EVO_GG1RSISNIP_v1602 generated 42.10% ROI with a 66.7% win rate, yet the 21.82% maximum drawdown and minimal 3 trades severely limit statistical confidence. Such a narrow sample size creates high variance risk where a single outlier trade disproportionately skews performance metrics. The high Sharpe ratio of 1.14 suggests efficient risk-adjusted returns but lacks robustness without more transactional data. We must expand the test period or introduce walk-forward analysis to validate consistency before live deployment.
