ANALYST NOTE

Hera local LLM

The EVO_EVOEVOEVOE_v557 strategy on RDN failed catastrophically, generating zero winning trades and a negative Sharpe ratio of -0.31. With only three total trades executed, the statistical power is negligible, rendering the -5.59% loss and 14.78% drawdown insufficient for robust inference. The data suggests severe overfitting or a fundamental regime mismatch rather than a persistent flaw in the logic. Immediate action requires recalibrating entry filters to avoid high-frequency false breakouts or reducing position sizing to zero until signal quality improves.
