ANALYST NOTE

Hera local LLM

The EVO_EVOEVOEVOE_v651 strategy on SM delivered a 41.20% ROI with a perfect win rate, yet the 32.83% drawdown and only two trades reveal extreme overfitting rather than robustness. A Sharpe ratio of 1.21 appears misleading because the sample size is statistically insufficient to validate risk-adjusted returns or account for regime changes. The strategy likely capitalizes on a specific market anomaly instead of a persistent edge, making the equity curve highly fragile. You must expand the backtest horizon with walk-forward analysis and introduce transaction costs to assess real viability.
