ANALYST NOTE

Hera local LLM

The EVO_EVOEVOEVOE_v660 strategy failed on VOXR, delivering a -2.01% ROI with a negative Sharpe ratio of -0.05. The sample size of only three trades severely limits statistical confidence, rendering the 33.3% win rate and 11.32% drawdown unreliable indicators of future performance. This underperformance suggests the current logic is overfit or misaligned with current market volatility rather than proving a systemic flaw. We must increase the sample size by running this strategy across a broader time horizon before drawing conclusions. The next step is to retest this configuration on a longer historical dataset to validate robustness.
