ANALYST NOTE

Hera local LLM

The EVO_EVOEVOEVOE_v663 strategy on LPG generated a +42.10% ROI with a 1.14 Sharpe ratio, driven by three winning trades that avoided any drawdown exceeding 21.82%. However, the statistical significance is critically low due to a sample size of only three trades, rendering the high win rate of 66.7% unreliable for institutional deployment. The strategy's robustness remains unproven because a single outlier could easily invalidate the apparent edge in a live market environment. We must expand the backtest parameter space to generate a larger dataset before considering live capital allocation.
