ANALYST NOTE

Hera local LLM

The AMZN backtest for EVO_EVOEVOE_v686 failed, posting a -2.39% ROI and -0.12 Sharpe with a 17.43% drawdown. Such poor performance stems entirely from a sample of only three trades, rendering any statistical conclusions invalid. The 33.3% win rate indicates the signal logic is currently misaligned with current market volatility. We must increase the sample size before adjusting parameters, as this result lacks predictive value. The immediate next step is to run a fresh simulation on AMZN with tighter entry filters to validate the strategy's robustness.
