ANALYST NOTE

Hera local LLM

The EVO_EVOEVOEVOE_v704 strategy on GC=F failed to generate alpha, delivering a negative return of -4.00% alongside a poor Sharpe ratio of -0.36. With only three executed trades, the sample size is statistically insignificant and creates a high probability of overfitting to specific noise rather than capturing a genuine trend. A 33.3% win rate combined with a 12.60% maximum drawdown suggests the entry logic is excessively aggressive for the current volatility regime. We must recalibrate the risk parameters to reduce position sizing before re-testing this configuration on a larger dataset to validate its robustness.
