ANALYST NOTE

Hera local LLM

The EVO_EVOEVOEVOE_v757 backtest on VOXR yielded a -2.01% ROI with a Sharpe of -0.05, driven by only three trades and a 33.3% win rate. Such a small sample size renders the negative performance statistically insignificant and unrepresentative of true strategy robustness. The 11.32% maximum drawdown suggests significant volatility risk that requires further stress testing before deployment. We must increase the sample size through a longer historical lookback or a different market regime to validate the signal logic. Proceeding with live execution based on this limited dataset would be premature and statistically unsound.
