ANALYST NOTE

Hera local LLM

The EVO_WEBIDEA_v1501 backtest on gold futures failed decisively, delivering a negative ROI and a Sharpe ratio of -0.36. With only three trades executed, the statistical significance is negligible and the 33.3% win rate is unreliable. A maximum drawdown of 12.60% indicates poor risk-adjusted returns during this specific sample. The strategy clearly lacks robustness under current market conditions and requires parameter optimization before live deployment. We must run a larger sample size test or discard the approach entirely to avoid capital erosion.
