ANALYST NOTE

Hera local LLM

The FRST backtest shows a +14.89% ROI with a 66.7% win rate, yet statistical confidence is critically low due to only three trades. While the Williams %R oversold filter captured momentum effectively, the sample size prevents reliable assessment of risk parameters like the 8.83% drawdown. A Sharpe ratio of 1.10 suggests mediocre risk-adjusted returns compared to larger datasets, indicating the strategy may be overfitting to recent noise. We must expand the sample by running a walk-forward analysis or increasing the lookback period to validate if these metrics hold across different market regimes.
