ANALYST NOTE

Hera local LLM

The FCF · GG7_Williams_Oversold backtest shows a perfect 100% win rate and positive ROI, but the statistical confidence is negligible due to only two trades. A single loss would have erased nearly half the gains, exposing a severe fragility in the strategy's robustness. The 12.19% drawdown suggests that while the filter captures low-risk setups, the sample size is too small to validate the Sharpe ratio of 1.05. We must immediately expand the test period or adjust parameters to generate a sufficient trade history before deploying live capital. This analysis confirms the need for a larger dataset to distinguish between luck and genuine alpha generation.
