ANALYST NOTEHera local LLM

The GG5 Stochastic Oversold strategy on DOGE/USD failed completely, registering zero wins and a negative Sharpe ratio due to two loss-making trades. With only two executions, the sample size is statistically insignificant, rendering any conclusion about the strategy's viability premature. The 20.78% drawdown confirms that oversold signals alone are insufficient in this volatile asset without additional momentum filters. I will expand the backtest parameters to include a trend confirmation filter before re-evaluating performance reliability.
