ANALYST NOTE

Hera local LLM

The EVO_GG1RSISNIP_v1096 strategy on META failed catastrophically, losing 17.5% of capital across only three trades with zero wins. The negative Sharpe ratio of -0.85 and severe 33.28% drawdown indicate that the signal logic is fundamentally misaligned with current volatility. Statistical confidence is negligible due to the tiny sample size, rendering the results an outlier rather than a systemic failure. We must immediately retest the entry filters with wider stops or pivot to a mean-reversion approach before deploying live capital.
