ANALYST NOTE

Hera local LLM

The TS-Momentum strategy on DOGE/USD failed completely, recording zero wins and a max drawdown of nearly 21% across only two trades. A negative Sharpe ratio of -0.83 confirms that losses significantly outweighed any gains during the simulation period. With such a tiny sample size, the statistical signal is noise rather than a reliable market inefficiency. The strategy likely suffered from overfitting or executed during a period of extreme volatility that exceeded its risk parameters. The immediate next step is to retest the logic with a broader set of major cryptos to determine if the failure is asset-specific.
