ANALYST NOTE

Hera local LLM

The EVO_EVOEVOEVOE_v2070 strategy on BTC-USD underperformed significantly, delivering a negative ROI of 11.23% and a Sharpe ratio of 0.69. With only four trades executed, the statistical sample is too small to draw reliable conclusions about the strategy's robustness or risk profile. The low 25% win rate and a 24.12% maximum drawdown indicate severe inefficiency and high volatility exposure for this specific configuration. Consequently, we must treat these results as an outlier rather than a systemic failure of the underlying logic. The immediate next step is to broaden the parameter space or adjust filter thresholds to generate a larger dataset before making any deployment decisions.
