ANALYST NOTE

Hera local LLM

The EVO_GG1RSISNIP_v28 strategy on LPG shows a 42.10% ROI with a 1.14 Sharpe ratio, but the statistical significance is negligible due to only three total trades. A maximum drawdown of 21.82% reveals substantial vulnerability during adverse price action that the limited sample size masks. While the 66.7% win rate appears promising, the extreme sample count prevents any reliable assessment of strategy robustness or risk-adjusted returns. Increasing the backtest period to include volatile market regimes is the critical next step to validate performance. This analysis remains strictly educational and does not constitute investment advice.
