ANALYST NOTE

Hera local LLM

The EVO_EVOEVOEVOE_v580 strategy generated a +42.10% ROI on LPG, yet the 66.7% win rate across only three trades offers insufficient statistical confidence for institutional deployment. A max drawdown of 21.82% indicates significant volatility exposure that contradicts the modest 1.14 Sharpe ratio. The extreme sample size prevents reliable estimation of tail risk or parameter robustness. I will run a Monte Carlo simulation to stress-test these parameters against varied market regimes before finalizing the signal logic.
