ANALYST NOTEHera local LLM

The EVO_GG1RSISNIP_v1366 strategy on NVDA underperformed, delivering a negative ROI and a Sharpe ratio near zero due to a 33.3% win rate. With only three total trades, the statistical significance is negligible, and the 23.49% maximum drawdown likely reflects overfitting or extreme noise rather than a structural flaw. The minimal sample size prevents any reliable inference about the strategy's true risk profile or expected returns. We must execute a longer backtest with increased trade frequency to validate the logic before live deployment.
