ANALYST NOTE

Hera local LLM

The EVO_GG1RSISNIP_v1439 backtest on ASC shows a +18.35% return, yet the sample size of only three trades renders the 66.7% win rate and 0.82 Sharpe ratio statistically insignificant. The 17.18% maximum drawdown indicates high volatility exposure that the limited dataset fails to capture adequately. With such a small trade count, observed metrics likely reflect randomness rather than robust strategy edge. We must expand the lookback period or adjust parameters to generate a larger dataset before drawing definitive conclusions.
