ANALYST NOTE

Hera local LLM

The EVO_EVOEVOEVOE_v1971 strategy generated a 42.10% ROI on LPG but executed only three trades, rendering the Sharpe ratio of 1.14 and 66.7% win rate statistically insignificant due to extreme sample size. The 21.82% maximum drawdown suggests high volatility exposure that lacks sufficient data points to confirm robustness over varying market regimes. This performance cannot be generalized or trusted for live deployment without a larger backtest window to validate consistency across different market cycles. The immediate next step is to run an out-of-sample backtest with expanded historical data to determine if the alpha is genuine or a result of overfitting.
