ANALYST NOTE

Hera local LLM

The EVO_EVOEVOE_v1757 strategy on TSLA produced a single losing trade, resulting in a negative ROI of 3.15% and a drawdown of 15.69%, which indicates a complete lack of edge rather than market noise. With a win rate of 0% and only one executed trade, the statistical significance is zero, rendering any performance metrics meaningless for live deployment. The strategy failed to generate a profitable signal within the tested sample, suggesting the entry logic requires fundamental restructuring. Future iterations must incorporate broader parameter sweeps to validate signals and ensure robustness across different market regimes.
