ANALYST NOTE

Hera local LLM

The EVO_EVOEVOEVOE_v2295 backtest on ASC shows an 18.35% gain but lacks statistical significance due to only three trades. A 66.7% win rate paired with a 0.82 Sharpe ratio suggests the edge is noisy rather than robust. The 17.18% maximum drawdown indicates significant downside risk that the small sample size cannot fully capture. We must expand the test window or adjust parameters before deploying capital. Next, I will run a sensitivity analysis across different timeframes to validate the strategy's stability.
