ANALYST NOTE

Hera local LLM

The EVO_WEBIDEA_v46 backtest on AMD shows a 87.88% gain with a Sharpe ratio of 1.61, but the single trade sample size renders the 50% win rate statistically meaningless. A 26% drawdown on one position highlights extreme volatility exposure rather than systemic strategy risk. Confidence in these metrics is negligible until the strategy survives a larger dataset. The immediate next step is running a walk-forward analysis to verify signal robustness before live deployment.
