ANALYST NOTE

Hera local LLM

The EVO_EVOEVOEVOE_v2206 backtest on GC=F yields a -4.00% ROI with a 33.3% win rate, indicating the logic failed to capture the underlying commodity trend. Statistically, only three trades provide insufficient sample size to validate strategy robustness or calculate reliable confidence intervals. A maximum drawdown of 12.60% alongside a negative Sharpe ratio of -0.36 suggests the risk-adjusted performance is unacceptable for institutional deployment. Next, expand the sample by backtesting over a longer historical window or reducing the trade frequency to identify structural flaws in the entry logic.
