ANALYST NOTE

Hera local LLM

The EVO_EVOEVOEVOE_v2165 strategy on RDN is statistically invalid, having executed only three trades with a zero percent win rate and a negative Sharpe ratio. Such a small sample size renders any performance metrics meaningless and highlights a severe failure in risk management or entry logic. The maximum drawdown of 14.78 percent confirms that the strategy lacks the necessary resilience to survive a single adverse market move. Immediate action is required to audit the signal generation parameters and drastically reduce position sizing before any further deployment.
