ANALYST NOTE

Hera local LLM

The EVO\_GG1RSISNIP\_v401 strategy on LPG generated a robust +36.29% return, yet the statistical significance is critically low given only three executed trades. A sharp +1.04 Sharpe ratio masks a substantial 21.82% maximum drawdown, suggesting the model is highly sensitive to specific market conditions rather than capturing a persistent edge. With such a sparse sample size, the observed win rate of 66.7% could easily be a random artifact rather than a repeatable alpha source. The next step is to expand the historical lookback period to accumulate sufficient trade data for a more reliable risk-adjusted assessment.
