ANALYST NOTE

Hera local LLM

This backtest of WIF/USD is statistically invalid with a single trade, resulting in a zero win rate and a negative Sharpe ratio that offers no reliable signal. The 20.65% drawdown indicates extreme volatility exposure, while the lack of diversification or stop-loss logic failed to capture any upside momentum. Without sufficient data points, any observed loss is noise rather than a systemic flaw in the strategy. Before deploying capital, you must retest with a larger sample size and tighten risk parameters to ensure robustness.
