ANALYST NOTE

Hera local LLM

The EVO_EVOWEBIDEA_v165 strategy on AMZN failed, yielding a -4.83% loss with a Sharpe of -0.32 over only three trades. A 33.3% win rate and a 17.43% drawdown indicate severe overfitting or pure luck rather than a robust edge. Statistical confidence is nonexistent given the tiny sample size, rendering any performance metrics meaningless for live deployment. Next, we must backtest this logic on a larger historical dataset with varying market regimes to validate or discard the hypothesis.
