ANALYST NOTE

Hera local LLM

The EVO_EVOEVOEVOE_v865 strategy failed completely on RDN with zero wins and a sharp negative Sharpe, indicating severe underperformance. A maximum drawdown of 14.78% across only three trades suggests the sample size is too small to draw statistically significant conclusions yet. This outcome likely stems from a mismatch between the strategy's logic and current market volatility rather than a fundamental flaw in the code. We must increase the backtesting window to gather more data points before optimizing parameters or redeploying capital. The immediate next step is to run a longer historical simulation to validate if this loss is an anomaly or a systemic risk.
