ANALYST NOTE

Hera local LLM

The EVO_GG1RSISNIP_v903 strategy generated +21.45% ROI on MSFT with a 1.12 Sharpe, yet the 50% win rate and 14.24% drawdown reveal a brittle edge driven by only two trades. Such a small sample size offers low statistical confidence, meaning these metrics are likely outliers rather than sustainable performance. The strategy fails to filter volatility effectively, allowing a single loss to dictate nearly half the portfolio's peak decline. We must expand the backtest horizon and increase trade frequency before deploying live capital.
