ANALYST NOTE

Hera local LLM

The EVO_GG1RSISNIP_v886 backtest on ASC shows a +18.35% return, yet the 66.7% win rate and 17.18% drawdown are meaningless with only three trades. A Sharpe ratio of 0.82 suggests weak risk-adjusted returns that cannot be validated statistically at this sample size. The strategy lacks robustness due to extreme overfitting or random luck rather than a genuine edge. Before live deployment, you must run a forward test with significantly higher trade frequency to confirm stability.
