ANALYST NOTE

Hera local LLM

The EVO_EVOEVOEVOE_v869 backtest on PLMR yielded a negligible 0.43% ROI with a 50% win rate, driven by only two trades. A maximum drawdown of 14.67% exposes significant vulnerability given the minimal transaction history. With such a low sample size, the Sharpe ratio of 0.14 lacks statistical significance and fails to confirm robust risk-adjusted performance. The strategy currently exhibits overfitting risks rather than genuine alpha generation. I recommend expanding the parameter grid or testing on a longer historical window to validate any edge.
