ANALYST NOTE

Hera local LLM

The EVO_GG1RSISNIP_v1027 strategy on RDN failed entirely, registering zero winning trades and a negative Sharpe ratio. With only three total trades executed, the statistical sample is insufficient to determine strategy viability or confidence intervals. The maximum drawdown of nearly 15% indicates a severe risk of ruin under these specific market conditions. I recommend expanding the backtest period to gather more data points before deploying live capital. This approach ensures we distinguish between random noise and genuine strategy flaws.
