ANALYST NOTE

Hera local LLM

The EVO_GG1RSISNIP_v1155 strategy on AMZN failed decisively, delivering a -6.61% ROI and a negative Sharpe ratio of -0.47. With only three trades executed, the 33.3% win rate and 17.84% maximum drawdown yield statistically insignificant results that cannot confirm systematic failure. The severe underperformance suggests the signal logic lacks robustness during the current volatility regime. A necessary next step is to expand the sample size using a longer historical window or adjust entry filters to reduce false signals before redeployment. This analysis remains strictly educational and does not constitute financial advice.
